Problem Details

Configuration and prompt for the selected version

Edit Problem | Run in Interactive Mode

System Prompt (From Environment)

Additional tips:
- You have access to conda / mamba, including the bioconda channel, and pip to manage and install software and python packages. To avoid permissions issues and package conflicts, you should install each tool into a different conda / mamba environment. You can do so using "mamba create -n <environment_name> python=<version> <package> -c bioconda". You can then run the tool by activating the mamba environment: "mamba activate <environment_name>". Several pre-installed environments, tools, and packages are available for use.
- Relevant data can be found in /tmp/files/
- Copy any intermediate and final outputs into /tmp/outputs for posterity
- If you find an example workflow in /tmp/files, use that workflow for answering the questions
- Put your final answers to the questions in <answer> tags
